

# Sock Matching

## You will need:

- 4-6 pairs of socks of different colors and designs

## Main Activity

1. Create two workstations or areas.
2. In workstation 1, place one of each pair of on a table or on the floor. Students should be able to clearly see the socks.
3. In workstation 2, place the other sock from the pair one pile.
4. Ask students to pick a sock from the pile in workstation 1 and go to workstation 2 or and find its match or partner sock.
5. Once the students have paired the chosen sock correctly, have them fold the pair together and place to the side.
6. Repeat until all of the socks in the pile in workstation 2 have been paired!

## Extension

Once students have practiced and mastered the main activity, complete the same activity but only use one workstation. Place all socks in a pile and have students find the match or partner sock within the pile. Once they have located a match, have them fold the pair together and place to the side. Repeat until all of the socks in the pile have been paired!
